

COMPANY PROFILE

The Group

Diagram was established in 2024 through the transformation of the IBF Servizi SpA Group and the **acquisitions** of Agronica Srl, Abaco SpA, Agriconsulting SpA and Netsens Srl.

It is a **leading Italian and European company in the digitalization of services** dedicated to the **agri-food sector**, in the development of **farm management software** and in the management of processes for **delivering, monitoring** and **controlling** environmental and agricultural support programs.

As a **partner to major Governments** across Europe, it supports Public Administrations, farms, banks and insurance institutions and the agri-food industry with the goal of **promoting social, economic, and environmental sustainability**.

Today, the company is owned 41.6% by **CDP Equity**, 41.6% by **Trilantic Europe**, and 15% by **BF International**.

Mission and Vision

OUR MISSION

Providing the best agritech solutions and spreading the digital culture in the Public Administration and the agricultural business world with the aim of **raising the levels of social, economic and environmental sustainability** in the agri-food supply chains.

OUR VISION

The digital transition in public administration and agribusiness through modern satellite technologies, artificial intelligence and precision farming techniques will help **create a safe, sustainable and efficient social and economic ecosystem.**

Diagram Solutions

Starting from **scientific research**, Diagram Group develops and offers management software, sensor technologies and services for the agriculture and land management sectors, working with public administrations, farms, food companies, banks and insurances. The Group partners with governmental bodies and private sector stakeholders to promote the social, economic and environmental sustainability of agri-food supply chains by leveraging:

- Management systems for public programs supporting agriculture and environmental protection.
- Specialised advisory services, impact assessments, and policy agricultural, environmental, and land management sectors.
- Soil health and long-term sustainability monitoring systems.
- Development of public infrastructure for agro-meteorological data collection.
- Tools for comprehensive financial and climate risk assessment of agribusinesses.
- Integrated farm management systems aimed at optimizing agri-food supply chains.
- Advanced Decision Support Systems (DSS) for crop protection and nutrition.
- Livestock Management Solutions.
- Comprehensive services for land and farm management.

For Public Sector Institutions

- Digital solutions that assist governments and public authorities in optimizing the management and implementation of national and local programs for agricultural support and environmental monitoring.
- **Digital soil mapping tools for tracking key sustainability indicators, including soil erosion, carbon sequestration, and overall soil health assessment.**
- Support to public entities and institutions in drafting impact studies and evaluating agricultural, environmental, and land management policies through innovative monitoring and analysis tools.
- Development of public infrastructure through extensive IoT sensor networks for the collection of agrometeorological data.

For Banks and Insurance Companies

- Corporate financial and climate risk assessment to support investment decision-making and credit rating analysis.
- Qualitative evaluation of agribusinesses based on crop production, economic performance and environmental impact.
- Sustainability profiling through the monitoring of environmental indicators such as organic carbon sequestration, soil erosion and climate risk indices.
- Enhanced customer insight in relation to measurable progress toward ESG goals.
- Detection of extreme weather events and development of climate risk indices.
- Estimation of qualitative and quantitative losses in agricultural production resulting from catastrophic events.
- Management of damage assessments and compensation workflow.

For Agricultural Production

- Farm management and precision agriculture solutions dedicated to agricultural supply chains, enabling total production control and significantly supporting the adoption of more sustainable production practices.
- Decision Support Systems featuring variability maps, seeding and nutrition maps, crop protection guidance against primary threats, and optimized water resource management.
- Monitoring systems based on key vegetative indices, providing qualitative and quantitative yield estimations, alongside complete digitalization of treatment records.
- Comprehensive livestock and herd management, covering traceability and animal nutrition.

**Complete management of land and farms
on behalf of the property.**

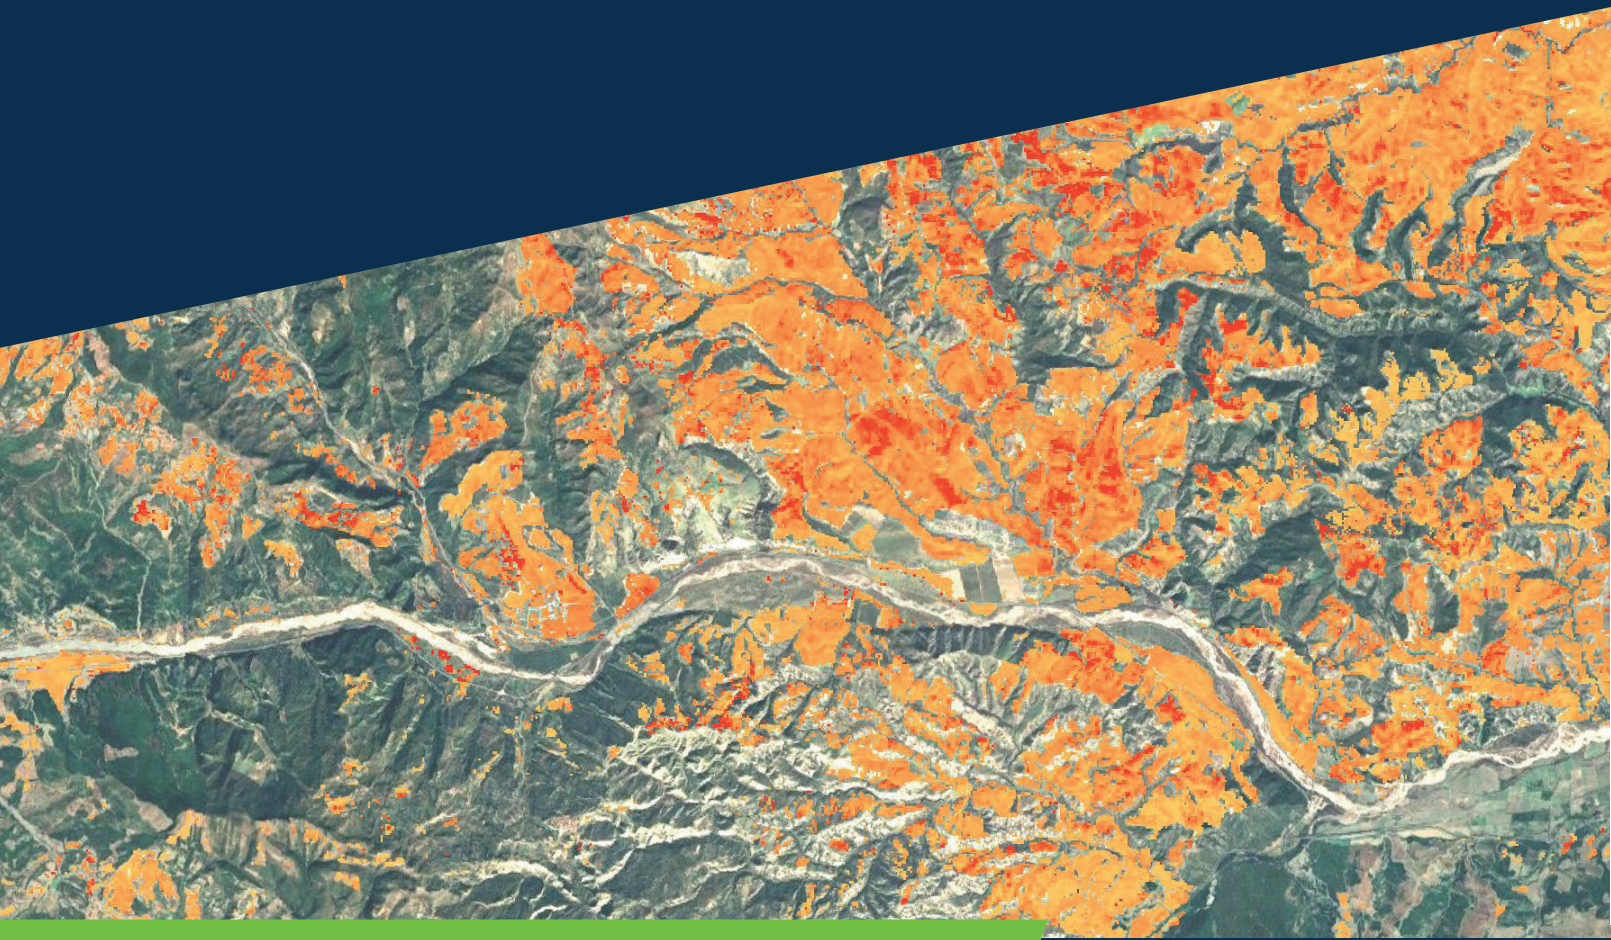

Demetra

For Retail and Food Companies

- Supply chain management, including traceability, compliance with standards, audits, checklists and agronomic support.
- Monitoring and evaluation of environmental sustainability parameters.
- Tracking soil erosion throughout the supply chain.
- Monitoring carbon sequestration throughout the supply chain.
- Soil health assessment across the entire supply chain.

Global commitment

With ambition to confirm itself as a **market leader in Europe and beyond**, Diagram Group is constantly strengthening its international **presence by cooperating globally** with governments, administrations and companies.

The Group provides advanced management services and solutions that effectively meet the needs of the **private and public administration market**.

Particularly important is the work carried out on the African continent aimed at the efficiency and traceability **of renewable energy supply chains**.
